

## Wolf Numbers Show Dramatic Increase and Possible Leveling

Monday, 25 June 2012 09:01 -

---

Adrian Wydeven can remember when there were only a few wolves wandering around in Wisconsin. A few dozen at the most. The most recent count, says the DNR biologist, is a far cry from that; nearly nine hundred wolves. Or somewhere around that

Wydeven believes a hunt this fall could get the state closer to the goal of 350 wolves this fall.
