

What caused 20-year-old Shelby Perkins to die last May?

The pathologist who performed an autopsy on Perkins said in court today there was no other clear cause of death besides heroin use. Dr. Susan Roe testified this morning at the La Crosse County trial of Shelby's boyfriend, Mitchell Perner, who's charged with reckless homicide. Perner is accused of buying the heroin which led to Shelby's overdose. The trial began this morning, and should last through Friday.
